Maksym Portianoi

Software engineer

About me

I am a detail-oriented software engineer and UI designer aspiring to be an entrepreneur. While my passion and primary area of focus is designing and building awesome user interfaces, I have extensive skills that go far beyond that. Outside of work I am a music lover who likes outdoor activities, board games and books.

Experience

Software engineer @ The Rumie Initiative

May 2019 - Present, Toronto

As a part of the Rumie development team I was involved in several projects. My key accomplishments include:
· Creating analytics section of a web application using CubeJS and Node.js Express and seamlessly integrating the solution in existing Vue.js codebase;
· Delivering front-end portion for internal staff portal (REST API-driven Nuxt Vue.js application);
· Rapid ground-up development of a complex platform for real-time collaborative creation of unique learning experiences (Nuxt Vue.js and Firebase application).

Web developer intern @ Northern Commerce

Jan. 2019 - Apr. 2019, London ON

At Northern I've learned how to work as a part of a professional team expanding my skillset. My responsibilities were:
· Custom Wordpress theme development;
· Wordpress site maintenance;
· Content updates for blogs and ecommerce sites.

Part-time web developer @ Reactr - Fanshawe College

Oct. 2018 - Apr. 2019, London ON

At Reactr I was involved in two different scale projects as a full-stack developer. I had a chance to contribute as a team member in a number of ways:
· Debugging errors in Laravel app;
· Implementing vanilla-JS UI solutions;
· Taking over on second phase of development of a non-API-driven Laravel web app;
· Creating and maintaining documentation on existing codebase.

Education

Fanshawe College, Interactive media design

Jan. 2018 - Apr. 2019, London ON

Sumy State University, Computer sciences

Sep. 2015 - June 2019, Sumy, Ukraine

Technology

Most of the time I code in JavaScript. Being mostly a "front-end guy", I spend majority of my productive hours designing and building user interfaces in Vue.js (Nuxt) and CSS (my all-time-favourite CSS library is Tailwind, but I am familiar with other libraries too). However, should a project require it, I feel comfortable working on Node back-ends and APIs or architecting databases (both SQL and noSQL). Occasionally (not on a daily basis) I deal with some AWS and Google Cloud stuffs (authentication, hosting, microservices, storage and queueing), deployments (Heroku, Netlify) and testing suites (Jest, Cypress).
